

T-SERIES AND TX-SERIES

# Service Support Handle

## Prioritize Safety at Work

### WHY CHOOSE OUR SERVICE SUPPORT HANDLE?

- **Safe Access and Disembarkation:**  
Ensure smooth and secure access for technicians working on the cab.
- **Maintain Balance:**  
Helps technicians maintain balance and avoid workplace accidents.

### IDEAL FOR

- TK technicians
- Customers performing their own maintenance

### HOW IT WORKS

Our service support handle provides an additional point of support for technicians climbing on top of the truck cabin for service purposes. Positioned on the control box door side, it is secured with additional aluminum insert blocks that have been rigorously tested to withstand reasonable loads.

### SAFETY CONSIDERATIONS

This handle is designed as a three points-of-contact device, allowing technicians to use two feet and one hand simultaneously when ascending or descending from the cabin roof. It is not intended for use as a safety anchor point for personal protective equipment against falls.

### MODEL AVAILABILITY

- **Current T-Series:**  
Compatible with all models except T-560R/T-Dairy and RT-800R.
- **Upcoming TX-Series:**  
Compatible with all models except RT-800X.

### HOW TO ORDER

The service support handle is available to order as a factory-fit option or aftermarket kit

| CHANNEL     | PART NUMBER        | COMPATIBILITY                                              |
|-------------|--------------------|------------------------------------------------------------|
| Factory     | Factory-fit option | For the new TX-Series platform                             |
| Aftermarket | 905518             | For retrofit of the current T-Series, or the new TX-Series |

## Stay Safe and Secure with Our Service Support Handle!
